

STATE FACTSHEET

New Hampshire

2017

ATSDR investigated perfluorooctanoic acid (PFOA) contamination in public and private drinking water sources near the Saint-Gobain Performance Plastics facility in Merrimack, New Hampshire. Of the 140,000 people who were assessed, as many 600 people were found to be potentially exposed to PFOA at this site. Recommended follow-up sampling is being conducted to learn more about the potential hazards at this site.
